

# CHOOSE YOUR SMALLER FORMAT!

Nowadays almost every substrate can be printed with very sharp images and vibrant colors.

Depending on the sublimation paper type you buy, you can transfer on lots of different media with varying sizes – from wide format textile applications to smaller format promotional products like mugs and phone covers.

Following requests from the market, Neenah Coldenhove launched new sizes for key products to serve the industry. These papers are a great fit for well known branded digital printers like **Mutoh RJ-900**, **Epson F500 series** and **Epson 6370**.

With these papers in your portfolio, you will be able to distribute to a large, targeted audience!

Sports garments are an essential element in sports performance. The required properties of high quality sportswear such as stretch-ability and colour brilliance differ in each and every application.

Neenah Coldenhove has developed a line of sticky sublimation papers with various grammages and different tack levels for printing on sportswear. With this line, you are ready to produce high quality sportswear in every application.

## Jetcol® HTR 3500

Jetcol® HTR3500 is the best seller in the signage market.

The specific design and porosity of this paper works perfectly with closed knitted fabrics and blackout textiles.

This 105-gsm paper delivers a high transfer yield, color consistency and sharpness – features that are essential in this strong and highly visible market.

## Jetcol® DHS

For over 25 years, JETCOL® has revolutionized the sublimation printing industry.

With the introduction of JETCOL® DHS, the hard substrates market is headed for a revolution in paper performance.

Our JETCOL® DHS will offer the market a way to print complex images with stunning photographic quality results.

## SUSTAINABILITY

Thanks to our inhouse water recovery management system, we re-use 95% of the water we need for paper production. After the water has been used 9 times it is cleaned in our own water effluent plant which we share with our 2 neighboring papermills in Eerbeek since 1960.

We invest in saving and re-using energy. Residual heat is used for heating offices in the winter and the public swimming pool in the summer of Eerbeek in the summer.

All our papers contain high quality fibers harvested from FSC managed forests.
